                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Domain
RESULT 18
                      AAW86007
                                                                          The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical insorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations of responsible for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human conditions in an acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cut fitp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                               Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

                                                                                                                                                                                                                                                                                                                                                               Gaps
                   This polypeptide comprises an autophosphorylating histidine kinase encoded by the Candida glabrata CgSln1 gene (see AAV80320). CgSln1 is a novel two component response regulator that is involved in benovypic switching, significant because of a direct correlation between phenotypic switching and the level of virulence of the organism. A claimed method for screening candidate pharmaceutical compounds involves contacting the test substance with yeast cells on the level of expression of the gene. The screening method is noted to identify compounds that effectively inhibit phenotypic switching, and thus pathogenicity, in C. glabrata for use as
                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                  ò
                                                                        AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) and sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to provent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastesses of haematopoietic artigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK49421 to AAK84500 and AAK82169 represent invention.

                                                                                                                                                                                                                                                                                       The present invention relates to Mycobacterium tuberculosis secreted proteins (MTSP), where the polypeptide has M. tuberculosis specific antigenic and immunogenic properties. Compositions of the invention may be useful for diagnosing Mycobacterium tuberculosis infection and as a vaccine against M. tuberculosis infection.
                                                                                                                                                                                                                                                                                                                                                                             Gaps

Claim 3; Page -; 182pp; English.

÷ The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention. Nucleotidylyltransferase mutated at one or more amino acids, useful in the synthesis of nucleotide sugars ď New protein from Neisseria gonorrheae, useful for the manufacture of medicament for treating or preventing N. gonorrheae infection Gaps Purine/pyrimidine triphosphate type nucleotidyltransferase #205. 0 Nucleotidylyltransferase, enzyme; active site engineering; apha-D-glucopyranosyl phosphate thymidylyltransferase; Ep; substrate specificity; nucleotide sugar; glycosylated bioactive natural product. 1.0%; Score 8; DB 24; Length 118; 100.0%; Pred. The invention relates to a Nucleotidylyltransferase mutated at one or more amino acids selected from V173, G147, W224, N112, G175, D111, E162, T201, I200, E199, R195, L897, L109, Y146 or Y177 (with reference to the Salmonella enterica rmlA-encoded alpha-D-glucopyranosyl phosphate the Salmonella enterica rmlA-encoded alpha-D-glucopyranosyl phosphate thymidylyltransferase, Ep, enzyme appearing as ABG9198). The mutations altering them are used in the synthesis of nucleotide sugars for altering uncleotidylyltransferase substrate specificity. The mutations rucleotidylyltransferase substrate specificity for nucleotidylyltransferase substrate specificity for Trp. CTP, TTP, UTP and ATP than a non-mutated nucleotidylyltransferase. The mutant may also exhibit a high degree of sequence identity to Salmonella enterica LT2 alpha-D-glucopyranosyl phosphate thymidylyltransferase (Ep) and can convert a wide variety of phosphates. The mutants can be exploited in the biosynthesis of glycosylated featurel products of pharmacological use. The present sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase exhibiting a high degree of phosphate thymidylyltransferase (Ep).

The myter may breast sequence is not displayed in the specification but was obtained from Genbank. ô The invention relates to a Nucleotidylyltransferase mutated at one or more amino acids selected from V173, G147, W224, N112, G175, D111, E162, T201, I200, E199, R195, L89, L89T, L109, Y146 or Y177 (with reference to Nucleotidylyltransferase mutated at one or more amino acids, useful in the synthesis of nucleotide sugars Gaps Purine/pyrimidine triphosphate type nucleotidyltransferase #212. ö Nucleotidylyltransferase, enzyme, active site engineering, appha-D-glucopyranosyl phosphate thymidylyltransferase; Ep, substrate specificity; nucleotide sugar; glycosylated bioactive natural product. ```
the Salmonella enterica rmlA-encoded alpha-D-glucopyranosyl phosphate thymidylyltransferase. Ep. enzyme appearing as ABG91798). The mutations involving them are used in the synthesis of nuclectide sugars for altering nucleotidylltransferase substrate specificity. The mutations conclectidylltransferase substrate specificity. The mutant may also exhibit a high degree of sequence identity to The mutant may also exhibit a high degree of sequence identity to the mutant may also exhibit a high degree of sequence identity to the mutant may also exhibit a high degree of sequence identity to the mutant can be exhloited in the blosynthesis of glycosylated bloactive natural products of pharmacological use. The present sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase exhibiting a high degree of sequence is a nucleotidylyltransferase (EB).

Note: The present sequence is not displayed in the specification but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential comparation of genes themselves and the encoded proteins. The prokaryotes used are secherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella premoniae, Pseudomonae aeruginosa and Entercoccus faecalis. The pneumoniae, Pseudomonae aeruginosa and Entercoccus faecalis. The premision of genesity of the identification of potential new targets in ratioodies capable of binding to the expresse these proteins. The proteins and to obtain antibodies capable of binding to the expresse discovery programmes. The antisense nucleic acid sequence is also useful to screen for for homologous nucleic acid sequence is also useful to screen a wide variety of organisms. The present sequence represents an awide variety of organisms. The present sequence represents an awide variety of organisms. The present sequence represents an awide variety of organisms. The present sequence represents and the printed specification, but was obtained in electronic format directly from WIPO at Comman directly from WIPO at Sequences.

The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.

The present invention describes a method for detecting a stress that alters a functional interaction of a low density lipoprotein (LDL) receptor interaction domain (I). The method involves introducing a predetermined stress into a system which provides a stress-biased physical interaction of (I) with absence of the stress, the system provides an interaction of (I) and (II), where a difference between BI and UI interaction of (I) and (II), where a difference between BI and UI is selected from SEMCAP-1, JIP-1, PSD-95, JIP-2, Tailn, OMP25, CAPON, PIP4,5 Kinase, Na channel brain 3, Mintl, ICAP-1 and APC subunit 10. The method is useful for detecting a stress that alters functional interaction of LDL receptor binding polypeptide with LDL receptor interaction domain. The method is useful for detecting and modulating represent LDL receptor binding proteins which are used in the exemplification of the present invention, which are used in the
                                                                                                                                                                                                                                                                                                                               Low density lipoprotein receptor binding protein; signal transduction;
LDL receptor binding protein; LDL receptor signalling pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting stress that alters interaction of LDL receptor binding polypeptide with LDL receptor interaction domain, comprises detecting difference in stress-biased and unbiased interaction of peptide and domain in a system -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide sequences derived from Escherichia coli which inhibit E. coli proliferation. AAA65890 to AAA66055 and AAB15886 to AAB16060 to Present nucleotide and protein sequences associated with E. coli proliferation. AAA6605 and AAA66057 represent primers used for sequencing E. coli proliferation inhibiting nucleotide inserts in an example from the present invention. Methods from the present invention can be used to identify a proliferation-required gene in a microorganism, by contacting a microorganism with a proliferation-required gene activity inhibitory nucleic acid identified in another organism, and determining if inhibition occurs in the second microorganism. The nucleic acid sequences identified as being required for bacterial growth and proliferation, can be used for antisense therapy for killing bacteria.
                                                                                                                                                                                                                                                                                                                                                                     Carr GJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotides and polypeptides associated with microorganism proliferation, used to identify inhibitors of bacterial growth and proliferation, for use in antisense therapy -

The sequences given in AAR26155-59 are peptides which were used in the scope of the invention as signal peptides. Their role is to initiate the translocation of a protein from the site of synthesis, but they are excised during translocation. The peptides which are translocated by these signal peptides are a new group of proteins which can be used for the detection and control of tuberculosis. They correspond to the 85-C antigen containing region of Mycobacterium tuberculosis and can be used in the production of
                                                                                                                                                                                                                                                                                                                                                                                   Translocation, 85-C, Mycobacterium tuberculosis, immunise, vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant peptide(s) and their nucleic acids - for diagnosing tuberculosis and as a vaccine against tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vaccines for immunisation against tuberculosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion
recognition (CAR) sequence. The MAs can be used for editions
nonclassical cadherin-mediated functions. They can be used for e.g.
inhibiting adhesion of nonclassical-cadherin expressing cells in a
mammal, enhancing delivery of a drug through the skin of a mammal,
companies in a mammal, attention of a cancer in a mammal, inhibiting
a manies, inhibiting metastasis of a cancer in a mammal, inhibiting
angiogenesis in a mammal, inducing apoptosis in a manmal, inhibiting
cepressing cell, preventing or treating obseity in a mammal, stimulating
blood vessel regression in a mammal, enhancing adelivery to the
central nervous system, treating a demyelinating neurological disease,
increasing vasopermeability in a mammal, enhancing adhesion of
central nervous system, treating cells, inhibiting synaptic stability in
mammal, or preventing pregnancy in a mammal. They can also be used for
e.g. enhancing or directing neutric outgrowth, facilitating wound
healing or reducing scar tissue, or enhancing ederction and diagnosis and
diabetes. The products can also be used for treating e.g. psoriasis,
arthritis, age-related macular degeneration, multiple sclerosis and
diabetes. The products can also be used for detection and diagnosis and
concludes, and AAX64573 to AAX64573 represent specifically calmed
peptides, and AAX64531 and AAX33183 to AAX33186 regreent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, complementary peptide, ligand, drug discovery, drug design.

The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a set of complementary peptide ligands generated from the human genome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are drug candidates or pro-drugs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G protein-coupled receptor (GPCR) antigenic peptide SEQ ID NO:1405

The present invention provides antigenic peptides from herpes simplex virus type 1 (HSV1) and 2 (HSV2) glycoprotein B (gB) which can be used the diagnosis of HSV infection, and identification of subtype, and in vaccines to protect against HSV. The present sequence is a fragment of the HSV-2 gB protein.
                         Continuous, isolated, antigenic polypeptide segment of herpes simplex virus (HSV) glycoprotein B1 or B2, useful in serodiagnostic immunoassays for distinguishing HSV-1 infection from HSV-2 in a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AA094405 encodes AAR77779 a goldfish derived osteoporosis treatment peptide. The peptide has a (pro-) osteoblast differentiation and activation effect, and a pref. dosage of 0.1-5 mg/kg/day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Goldfish; osteoporosis; osteoblasts; pro-osteoblasts; activation;
differentiation; treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAR26160-66 are peptides which were used in the scope of the invention to raise antibodies against tuberculosis. They correspond to regions of the 85-C antigen containing region of Mycobacterium tuberculosis and can be used in the production of vaccines for immunisation against tuberculosis. The peptides may be used to raise antisera and in this case would be synthesised with an additional cysteine residue, pref. attached to the amino terminal. This facilitates coupling of the peptide to a carrier molecule which is necessary to render the peptide immunogemic. (Updated on 25-MAR-2001 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                Sequences AAV58533-Y58972 represent antigenic peptides derived from
somatostatin receptor (SSR) subtypes of rat, mouse and human. The
invention relates to peptide antigens derived from a specific antigenic
region of a somatostatin receptor, to SSR subtype-specific antibodies
induced by the peptide antigens, and to immunological methods using the
SSR-subtype specific antibodies for determining the presence and
distribution of SSR subtype(s) in a tissue sample, and for the isolation
of SSR subtype specific antibodies for determining the presence and
purificacion of somatostatin receptor proteins. The antigenic region
of SSR is located in the C-terminus, which extends intracellularly from
transmembrane domain 7. The peptide antigens that are derived from this
sequences and the invention may be used for characterization of the SSR
methods of the invention may be used for characterization of the SSR
tumour sample, via immunological methods such as immunoble, and
cumour sample, via immunological methods such as immunoble, and
commander of SSR subtypes specific
somatostatin analogues and for their diagnostic and therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                     Rat/mouse somatostatin receptor SSTR1 antigenic region, SEQ ID NO:23.

Sequences AAY58533-Y58872 represent antigenic peptides derived from somatostatin receptor (SSR) subtypes of rat, mouse and human. The cinvention relates to opeptide antigens derived from a specific antipodies region of a somatostatin receptor, to SSR subtype-specific antipodies or induced by the peptide antigens, and to immunological methods using the SSR subtype specific antipodies for determining the presence and distribution of SSR subtype specific antipodies for determining the presence and distribution of SSR subtypes in the Cremminus, which extends intracellularly from transmembrane domain 7. The peptide antigens that are derived from transmembrane domain 7. The peptide antigens that are derived from transmembrane domain 7. The peptide antigens that are derived from this somatostatin antibodies which can distinguish between SSR subtypes. The methods of the invention may be used for characterisation of the SSR subtypes that are expressed by the cells of a tissue sample e.g., a tumunocytochemical or immunoprecipitation analysis. Identification of SSR subtypes sais important in the development of subtype specific con constant analogues and for their diagnostic and therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacteriophage 192 protein sequence 1820RF055.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27-OCT-2000 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23 NLESGGV 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bacteriophage 182.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAB16656;

The present invention describes a method for identifying a bacteriophage coding region encoding a product active on an essential bacterial target. The method comprises identifying a nucleic acid sequence encoding a gene product that provides a bacterial-inhibiting function when an uncharacterised bacteriophage infects a pachogenic bacterium. The compound active on a target of a bacteriophage inhibitor protein in a bacteria is used to treat or prevent a bacterial infection in an animal. AAA68241 and AAB16521 to AAA6842 and AAB16521 to AAA6842 and AAB16521 to AAA6842 and protein sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                         Identifying a bacteriophage coding region for treating bacterial infections comprises identifying a nucleic acid encoding a product that inhibits bacteria when a bacteriophage infects a bacterium
                                                                                                                                                                                                                                                                                                                                                                             Example 13; Page 326; 456pp; English.

RESULT 29
US-09-252-911A-31284
Sequence 31284, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TILE OF INVENTION: NACLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TILLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 25515, Application US/09252991A

Retent No. 6551795

US-09-252-991A-28069
Sequence 28069, Application US/09252991A
Fatent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AREQUINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
CURRENT FILING DATE: 1999-02-18
PRIOR PFILICATION NUMBER: US 60/074,788
                                                                                                                                                                                                                                                                                                                                                                         ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
FILE OF INVENTION: AREQUINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18

J Sequence 2416, Application US/09572404B

J Publication No. US20030078374A1

GENERAL INFORMATION:
APPLICANT: Proteom Ltd

TITLE OF INVENTION: Complementary peptide ligands from the human genome
FILE REFERENCE: Human patent
CURRENT APPLICATION NUMBER: US/09/572,404B

CURRENT FILING DATE: 2000-05-17

SOFTWARE: Proteatent version 1.0

SEQ ID NO 2416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                type II secretion protein yscC - Yersinia pestis plasmid pcD1

NyAlternate names: translocation protein C homolog

C,Species: Versinia pestis

C,Species: Versinia pestis

C,Date: 21-Jan-2000 #sequence_revision 21-Jan-2000 #text_change 21-Jul-2000

C,Accession: T43573; T42868

R,Hu, P.; Elliott, J.; McCready, P.; Skowronski, E.; Garnes, J.; Kobayashi, A.; Brubaker

N, Bacteriol. 180, 5192-5202, 1998

A;Title: Structural organization of virulence-associated plasmids of Yersinia pestis.

A;Recernice number: Z2278; MUID:98422474; PMID:9748454

A;Accession: T43573

A;Status: preliminary; translated from GB/EMBL/DDBJ
